

Software Test Plan

Application Under Test (AUT): VWO – Digital Experience Optimization Platform

URL: <https://app.vwo.com/#/login>

Framework: RICEPOT

Objective

The objective of this Test Plan is to define an industry-level testing approach for the VWO – Digital Experience Optimization Platform.

Application Under Test (AUT): VWO

URL: <https://app.vwo.com/#/login>

The purpose of testing is to verify the functional and non-functional requirements documented in the VWO Product Requirements Document (PRD).

The VWO PRD describes the platform as a digital experience optimization platform supporting experimentation, behavioral insights, personalization, program and workflow management, and integrations with external platforms.

This Test Plan is generated using the RICEPOT framework specified for the assignment. RICEPOT is used as the framework for generating the Test Plan; the final Test Plan follows the structure of the provided Software Test Plan Template.

Scope

The scope of testing is limited to the functionality and quality requirements explicitly documented in the VWO PRD.

Functional Requirements

Requirement ID	Requirement
FR1	A/B, Split & Multivariate Testing
FR2	SmartStats Engine
FR3	Visual & Code Editor
FR4	Heatmaps & Session Recordings
FR5	Audience Targeting
FR6	Real-time Reporting & Dashboards
FR7	Personalization Engine
FR8	Integration Connectors
FR9	Collaboration & Workflow Management

Documented User Flows

Setting Up an A/B Test

- Define hypothesis and target metrics.
- Select audience segment parameters.
- Configure test variations through the visual or code editor.
- Launch the test and monitor progress.
- Review SmartStats results and conclude the winner.

Analyzing Behavioral Data

- Access the VWO Insights dashboard.
- Generate heatmaps, record sessions, and set funnels.
- Correlate behavioral insights with test outcomes.

- Prioritize optimization ideas.

Non-Functional Requirements

- Performance: System responds within 2 seconds for editing workflows.
- Security: Two-factor authentication, role-based access control, and activity logs.
- Scalability: Support for high visitor volumes without performance loss.
- Data Privacy: GDPR, CCPA, and regional data-policy compliance.
- Reliability: 99.9% uptime SLA for enterprise customers.

Specific implementation details and testing methods for these requirements are not documented in the PRD.

Insufficient information to determine.

Inclusions

A/B, Split & Multivariate Testing

- Verify A/B Testing.
- Verify Split URL Testing.
- Verify Multivariate Testing.
- Verify experiments containing multiple variations.
- Verify definition of hypotheses and target metrics.
- Verify selection of audience segment parameters.
- Verify configuration of test variations through the visual or code editor.
- Verify launching and monitoring of tests.
- Verify review of SmartStats results.
- Verify conclusion of a winning variation as documented in the A/B testing workflow.

SmartStats Engine

- Verify Bayesian analysis of test results.
- Verify SmartStats results within the documented A/B testing workflow.

Visual & Code Editor

- Verify WYSIWYG experiment setup.
- Verify developer-level experiment setup.
- Verify configuration of test variations through the visual or code editor.

Heatmaps & Session Recordings

- Verify heatmap functionality for documented click, scroll, and focus interactions.
- Verify session recording functionality.
- Verify capture of user interactions for insights.
- Verify generation of heatmaps and session recordings within the documented behavioral-data workflow.

Audience Targeting

- Verify audience segmentation based on documented behaviors.
- Verify selection of audience segment parameters during experiment setup.
- Verify documented personalization segmentation based on geography, behavior, and demographics.

Real-time Reporting & Dashboards

- Verify delivery of up-to-date experiment analytics.

- Verify review of experiment results.
- Verify review of SmartStats results within the documented A/B testing workflow.

Personalization Engine

- Verify delivery of tailored experiences to segments.
- Verify segmentation based on geography, behavior, and demographics.
- Verify customized content delivery in real time.

Collaboration & Workflow Management

- Verify the central planning interface for optimization initiatives.
- Verify collaboration tools for distributed teams.
- Verify Kanban-style workflows for experiment backlogs.

Integration Connectors

Verify the documented integration capabilities involving:

- Google Analytics
- Mixpanel
- Shopify
- Salesforce
- Segment
- Snowflake
- WordPress
- Drupal
- CDPs
- Analytics systems
- Tracking tools
- Reporting tools

Specific integration configurations, API details, credentials, error codes, and synchronization mechanisms are not documented in the PRD.

Insufficient information to determine.

Performance

- Verify the documented 2-second response requirement for editing workflows.
- Verify support for high visitor volumes without performance loss.

Specific workload profiles, concurrency targets, throughput requirements, load-testing tools, and performance acceptance methodology are not documented in the PRD.

Insufficient information to determine.

Security

- Two-factor authentication.
- Role-based access control.
- Activity logs.

Specific authentication protocols, password policies, login behavior, session-management rules, security tools, and security-testing methodology are not documented in the PRD.

Insufficient information to determine.

Data Privacy

- GDPR compliance.
- CCPA compliance.
- Regional data-policy compliance.

Specific data-handling mechanisms, consent mechanisms, storage mechanisms, and compliance-testing procedures are not documented in the PRD.

Insufficient information to determine.

Reliability

- Testing will address the documented requirement of a 99.9% uptime SLA for enterprise customers.

Specific failover mechanisms, recovery procedures, outage thresholds, and reliability-testing methodology are not documented in the PRD.

Insufficient information to determine.

Test Environments

Application Under Test

Name	Env	URL
VWO – Digital Experience Optimization Platform	Application Under Test	https://app.vwo.com/#/login

Operating Systems

Insufficient information to determine.

Browsers

Insufficient information to determine.

Devices

Insufficient information to determine.

Network Connectivity

Insufficient information to determine.

Hardware and Software Requirements

Insufficient information to determine.

Security Protocols and Authentication Methods

The PRD documents two-factor authentication, role-based access control, and activity logs.

Specific security protocols and authentication mechanisms are not documented in the PRD.

Insufficient information to determine.

Access Permissions and Roles

- CRO Specialists
- Product Managers
- UX Designers
- Digital Marketers
- Analysts
- Engineering teams
- Business executives
- Digital Product Managers
- UX / UI Designers

- Growth & Marketing Teams
- Data Analysts / CRO Specialists
- Engineering / DevOps Teams

Specific application permissions and role-to-permission mappings are not documented in the PRD.

Insufficient information to determine.

Defect Reporting Procedure

Defect Identification Criteria

Insufficient information to determine.

Defect Reporting Steps

Insufficient information to determine.

Defect Triage and Prioritization

Insufficient information to determine.

Defect Tracking Tool

Insufficient information to determine.

Defect Process POC

Insufficient information to determine.

Roles and Responsibilities

Insufficient information to determine.

Communication Channels and Frequency

Insufficient information to determine.

Defect Metrics

Insufficient information to determine.

Test Strategy

The testing strategy is requirement-driven and limited to functionality and quality attributes explicitly documented in the VWO PRD.

Functional Testing

- A/B, Split URL and Multivariate Testing.
- SmartStats Engine.
- Visual & Code Editor.
- Heatmaps & Session Recordings.
- Audience Targeting.
- Real-time Reporting & Dashboards.
- Personalization Engine.
- Integration Connectors.
- Collaboration & Workflow Management.
- Setting Up an A/B Test user flow.
- Analyzing Behavioral Data user flow.

Performance Testing

- The documented 2-second response requirement for editing workflows.

- The documented requirement to support high visitor volumes without performance loss.

Specific testing procedures, tools, or acceptance methodology are not documented in the PRD.

Insufficient information to determine.

Security Testing

- Two-factor authentication.
- Role-based access control.
- Activity logs.

Specific testing procedures, tools, or acceptance methodology are not documented in the PRD.

Insufficient information to determine.

Data Privacy Testing

- GDPR.
- CCPA.
- Regional data policies.

Specific testing procedures, tools, or acceptance methodology are not documented in the PRD.

Insufficient information to determine.

Reliability Testing

- The documented 99.9% uptime SLA for enterprise customers.

Specific testing procedures, tools, or acceptance methodology are not documented in the PRD.

Insufficient information to determine.

Integration Testing

- Google Analytics
- Mixpanel
- Shopify
- Salesforce
- Segment
- Snowflake
- WordPress
- Drupal
- CDPs
- Analytics systems
- Tracking tools
- Reporting tools

Specific integration test procedures are not documented in the PRD.

Insufficient information to determine.

Regression Testing

Insufficient information to determine.

Test Design Techniques

Insufficient information to determine.

Test Schedule

Task	Time Duration	Task Dates
Creating Test Plan	Insufficient information to determine.	Insufficient information to determine.
Test Case Creation	Insufficient information to determine.	Insufficient information to determine.
Test Case Execution	Insufficient information to determine.	Insufficient information to determine.
Summary Reports Submission Date	Insufficient information to determine.	Insufficient information to determine.

Test Deliverables.

Insufficient information to determine.

Entry and Exit Criteria

Requirement Analysis

Entry Criteria:

Insufficient information to determine.

Exit Criteria:

Insufficient information to determine.

Test Execution

Entry Criteria:

Insufficient information to determine.

Exit Criteria:

Insufficient information to determine.

Test Closure

Entry Criteria:

Insufficient information to determine.

Exit Criteria:

Insufficient information to determine.

Tools

Insufficient information to determine.

The PRD does not specify testing, automation, defect-management, test-management, reporting, or documentation tools.

Risks and Mitigations

Only risks explicitly documented in the VWO PRD are included.

Risk	Mitigation
Technical Complexity	Provide robust SDKs and documentation, pre-built templates.
Data Accuracy Challenges	Use SmartStats and cross-tool validation integrations.
User Adoption	Onboard with guided tours, in-app support, analyst assistance.

No additional risks, impacts, priorities, or mitigation strategies have been introduced because they are not explicitly documented in the PRD.

Approvals

- Digital Product Managers

- UX / UI Designers
- Growth & Marketing Teams
- Data Analysts / CRO Specialists
- Engineering / DevOps Teams
- CRO Specialists
- Product Managers
- UX Designers
- Digital Marketers
- Analysts
- Engineering teams
- Business executives

The PRD does not specify approval authority, approval workflow, approval dates, sign-off criteria, or required approval sequence.

Insufficient information to determine.
